The innovation in rolling and security doors

Thanks to its unique technique and construction, this security door – unlike other rolling and security doors – requires limited installation space, making it suitable to every situation.

Certified security solution

Because Stackdoor is not rolled up but stacks vertically upwards, there were no conditions attached to material thicknesses in the development of the fence. Stackdoor is therefore made up of materials that are significantly stronger than those of traditional rolling grilles and has a unique patented mechanism through which the gate locks itself when it is closed. It is impossible to lift the gate. This way you have optimal protection against burglary, ram raid and vandalism.

Stackdoor is burglar-resistant and is officially WK2 certified (to the European standard EN1627 the RC 2 class) by SKG. Placed behind glass, a statement RC3 / WK3 can even be issued for the benefit of the insurer.

Benefits of Stackdoor:

STACKDOOR

Innovationspreis
Mit dem Innovationspreis ausgezeichnet
R+T 2018

Burglary resistance

The Stackdoor has a much higher burglary resistance than a rolling fence. Stackdoor has to the European norm EN1627 the RC 2 class on the stacking fences (behind glass RC3 / WK3).

Compactness

The Stackdoor stacking fences are extremely compact (not a big box but flat package)

Do not lift

Thanks to the simple and clever construction, using two chains, the Stackdoor Stacking Gate can not be lifted. So no extra lock or action is required to close the Stackdoor stacking fence.
Extremely simple and guaranteed safety.

Design

The Stackdoor stacking fence looks beautiful and fits perfectly in the facade.
